Please find below and/or attached an Office communication concerning this application or proceeding.

DETAILED ACTION

Abstract

The abstract of the disclosure is objected to because it is of undue length.

Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Specification

The Specification is objected to for not containing the proper layout and section headings as described below:

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.

Art Unit: 3663

- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

The specification and abstract are objected to for containing numerous grammatical errors due to the translation from Ukrainian to English. The specification and abstract were too long to check for all minor errors of this type. The applicant is asked to review and correct the errors. No new matter should be added.

Appropriate correction of these errors is required.

Claim Objections

Claims 1-9 are objected to because the claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Additionally, claims 1-9 are objected to because of the following particular informalities:

Claim 1 begins "The method of wave diagnostics." The sentence should start with "A method of wave diagnostics" since there is no antecedent basis for "The system." In correcting the claim language for errors from the translation into English from Ukrainian, the applicant is reminded to check for issues of a lack of antecedent basis (under USC 112, 2nd paragraph).

Dependent claims 2-9 all refer to their dependent claim by the abbreviated "cl. 1. the method" (or other number of the claim from which they depend). The dependence of each claim should be written as "The method according to claim __," with reference to their dependent claim in __ space.

Many of the claims state, "The method is characterized that ..." This should be corrected to read, "The method characterized in that ..."

Appropriate correction is required.

Exemplary patents of the language and form used in writing claims can be seen in cited prior art.

Allowable Subject Matter

Claims 1-9 would be allowable if rewritten to overcome the claim objections set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

This application is in condition for allowance except for the following formal matters:

The objections to the abstract, specification, and claims noted above must be met.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Bakulin, who discloses using elastic moduli in determining underground formation properties.

Pisetski, who discloses a method for determining the presence of fluids in underground formations using elastic moduli.

Miller, who discloses methods of determining earth parameters using elastic moduli which contribute to velocity models.

Folstad, who discloses using elastic moduli in seismic processing.

Thompson, who discloses a method for interpreting seismic records to yield indications of gas/oil in an earth formation.

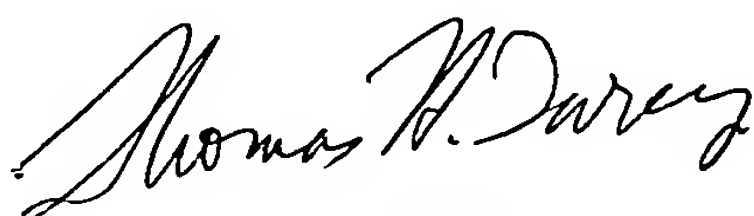

Wason, who discloses a system for monitoring the changes in fluid content of a petroleum reservoir.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott A Hughes whose telephone number is 703-305-0430. The examiner can normally be reached on 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on 703-306-4171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
